

ArmorTech® 28 + Si

Phosphite-based Plant Nutrient for Turf and Ornamentals

ArmorTech® 28 + Si is a buffered Potassium Phosphite with SILICA used to improve overall plant health and vigor

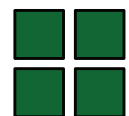

Features:

- LOW SALT INDEX
- BIO-AVAILABLE SILICA
- EXCELLENT TANK MIXABILITY WITH MICRO NUTRIENTS AND PESTICIDES
- IMPROVES OVERALL PLANT HEALTH AND INCREASES ROBUSTNESS
- SILICA ENHANCES CELL WALLS COMPLIMENTING THE CAPABILITIES OF THE POTASSIUM PHOSPHITE

How it works:

- **ArmorTech® 28 + Si** is perceived by plants as phosphate (P04). It is absorbed by green tissue, roots and shoots; however, it is in the P03 form of Phosphanate or “phosphite” which becomes available to the plant after oxidation. Absorption and systemic translocation occur within minutes of application through the xylem and phloem vascular system to all areas of the plant.
- **ArmorTech® 28 + Si** directly affects the plants metabolism cycle of phosphorylation within the krebs cycle of energy production. It directly causes the plant to generate more ADP (adenosine diphosphate) and more ATP (adenosine triphosphate) which directly affects overall plant health and vigor.
- Discover the many benefits of Phosphite-based fertilizer plant treatments for yourself with **ArmorTech® 28 + Si**
